These four tests were added during coding to make sure that the map generation had all necessary elements present

Added Tests :

MissingSinkPipe

```java
void MissingsinkPipe() {
    final var cellRep =
            "WWWW\n" +
                    "W.<W\n" +
                    "W..W\n" +
                    "WWWW";
    final var map = assertThrows(IllegalCallerException.class, () ->
Map.fromString(4, 4, cellRep));

}
```

Allows to check if a the sink pipe is checked at the creation of the map from a string.

MissingSourcePipe

```java
@Test
void MissingSourcePipe() {
    final var cellRep =
            "WWWW\n" +
                    "W..W\n" +
                    "W..>\n" +
                    "WWWW";
    final var map = assertThrows(IllegalCallerException.class, () ->
Map.fromString(4, 4, cellRep));

}
```

Check if the source pipe is detected upon creation of a map from a string.
